

A Context-adaptive thresholds

B Two-sided exceedances

C Accounting threshold variables

TATA	accruals/assets	DSRI
GMI	AQI	SBI
LVGI	leverage	ROA
current ratio	revenue growth	receivables/revenue
inventory/revenue		

21 threshold features

D Risk score and interpretation

$$\text{logit}(p) = b(z) + \sum w_{low}(z) low_exceed + \sum w_{high}(z) high_exceed$$

DeepCut identifies filing risk by learning context-dependent lower and upper accounting thresholds.
